**Problem – Solution Fit Template**

**1. CUSTOMER SEGMENT(S)**

Clients looking to hire skilled freelancers for project-based work via a fast, intuitive interface, and independent freelancers requiring a reliable platform to find work, submit bids, and manage active projects.

**2. JOBS-TO-BE-DONE / PROBLEMS**

Users need to securely authenticate, search and filter job/talent listings, submit and track proposals, and check project and transaction history. Admins need full user verification controls and dispute/transaction resolution tools.

**3. TRIGGERS**

Browsing open job listings on a dynamic, filterable job board; freelancer frustration with scattered, untrustworthy hiring channels; client bottlenecks while managing multiple candidate proposals.

**4. EMOTIONS: BEFORE / AFTER**

Before: Uncertain about freelancer credibility, frustrated by disorganized proposal tracking and unclear payment status. After: Confident in verified ratings and transparent project tracking, satisfied with real-time chat and sub-second page transitions.

**5. AVAILABLE SOLUTIONS**

Legacy coupled monolithic freelance marketplaces, manual offline hiring via spreadsheets and email threads, unsecured direct-messaging arrangements with no dispute protection.

**6. CUSTOMER CONSTRAINTS**

Requires a system baseline setup of Node.js (v16.x or superior), npm package manager dependencies, and a remote or local MongoDB connection instance string.

**7. BEHAVIOUR**

Asynchronously calling backend REST subtrees using an Axios HTTP broker engine from the client browser profile interface.

## **8. CHANNELS OF BEHAVIOUR**

8.1 ONLINE: Interactive React web portals, Git public source repository hubs.

8.2 OFFLINE: Local development sandboxes, manually executing terminal commands (npm run dev).

## **9. PROBLEM ROOT CAUSE**

Coupled legacy code environments lack stateless middleware access control layers and unoptimized rendering logic across multi-tenant database clusters, leaving freelance hiring workflows fragmented and unverifiable.

## **10. YOUR SOLUTION**

FreelanceHub Freelancing Platform: A fully decoupled MERN stack full-stack architecture mapping Mongoose data structures, with strict server-signed bearer token cryptographic role-based access control for clients, freelancers, and admins.
