

Project Design Phase
Proposed Solution Template

Date	15 February 2025
Team ID	
Project Name	FreelanceHub — Freelancing Marketplace
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Need to bridge the gap between independent freelancers and clients seeking project-based work, with a secure, scalable full-stack platform for hiring, collaboration, and payment tracking.
2.	Idea / Solution Description	FreelanceHub is a full-stack MERN platform utilizing a React frontend and an Express/Node backend middleware with MongoDB document persistence.
3.	Novelty / Uniqueness	Completely decoupled architecture with strict structural schema alignment via Mongoose, asynchronous Axios broker calls, customized JWT gatekeeper middleware for role-based access (Client/Freelancer/Admin), and a Smart Match skill-compatibility layer.
4.	Social Impact / Customer Satisfaction	Guarantees end-to-end project tracking, transparent bid/budget visibility, and verified ratings and reviews for enhanced trust and clarity between clients and freelancers.
5.	Business Model (Revenue Model)	Operational prototype for direct freelance hiring, extensible to commission-based transaction fees, premium subscription tiers for freelancers (featured listings), or client-side job-posting plans.
6.	Scalability of the Solution	Stateless middleware web server model allowing simple horizontal scaling; flexible non-relational cluster collections via MongoDB Atlas for growing users, projects, and chat/transaction data.
